Our Company Mission

In today's fast-paced digital world, dependable IT is the backbone of every successful business. We deliver tailored solutions that empower, connect, and protect what matters most to your organisation.

Our Values

Integrity First

Trust is our foundation; we do what's right, every time.

Accountability

We own our commitments and deliver on our promises.

Collaboration

Success is a team effort - yours and ours.

Continuous Improvement

We evolve with technology, always striving for better.

Attention to Detail

Every detail matters—your business deserves precision.

Comprehensive IT Services tailored for Your Business

Your time is valuable. Let us handle your IT, so you can focus on what you do best.

Network Oversight

We monitor your core systems, ensuring smooth operations.

Application Management

Keep your business apps performing at their best

System Maintenance

Our tools keep your devices updated and running efficiently.

Help Desk Support

Our experts are ready to assist whenever you need help.

Cyber Security

Protect your business with robust security measures and peace of mind.

Data Protection

We secure your data and ensure it's recoverable, no matter what.

Choose Your Level of IT & Cyber Security Maturity

Is your business protected? With Armour Networks, you can break away from legacy IT and build a resilient, future-ready defence.

Standard Managed IT

Basic Security | No Strategy

Still relying on outdated IT practices? This is like leaving your doors and windows unlocked—easy for opportunistic threats to slip in. Without a clear security strategy, your business is exposed to unnecessary risks and costly disruptions.

Managed IT + Cyber Security Maturity Level 1

Improved Security | Foundational Strategy

Take the first step towards protection. Level 1 is like always locking your doors and windows, making it much harder for intruders to gain access. You get essential controls and basic cyber awareness, forming a solid security foundation.

Managed IT + Cyber Security Maturity Level 2

Tighter Security | Well-Formed Strategy

Ready for stronger defences? Level 2 is the equivalent of having your house locked up with an alarm system and cameras. Your business benefits from advanced monitoring, forensic capabilities, and a proactive security posture that deters and detects threats.

Managed IT + Cyber Security Maturity Level 3

Enterprise Security | Fully Formed Strategy

For organisations that demand the highest level of protection. Level 3 is like having 24/7 security guards on site—your attack surface is dramatically reduced, and compliance is assured. This tier includes privileged access management and continuous monitoring for complete peace of mind.

Break away from legacy IT. Choose the maturity level that fits your business and start building a safer, smarter future today.

Start your digital transformation journey now

Build Your Perfect Package

Strategic IT & Cyber Security Alignment.

Choose the right combination of Managed IT & Cyber Security services for your business

On boarding & Quarterly Business Reviews

We believe your IT and cyber security strategy should evolve with your business. That's why Armour Networks conducts quarterly reviews—ensuring your technology solutions always support your goals and keep you ahead of emerging threats.

Managed IT Services

Our team regularly assesses your network, systems, databases, and applications to keep everything running smoothly. We manage Microsoft 365 licensing, provide ongoing IT support, and offer optional cyber security training to empower your staff and reduce risk. All Managed IT Services include essential security protection for your users, devices and services.

Build Your Perfect Package

We begin every partnership with a thorough assessment of your current cyber security posture. From there, we design a strategy tailored to your unique needs—helping you close gaps and strengthen your defences.

Onboarding & Quarterly Business Reviews

Managed IT Services

Cyber Security

↳ **Maturity Level 3**
or Maturity Level 2
or Maturity Level 1

MATURITY LEVEL 3

Enterprise Protection | Full Compliance

Designed for organisations with sensitive data or strict regulatory requirements, Level 3 aligns with ACSC Essential Eight controls and is ideal for councils, government, financial institutions, and larger enterprises. Privileged Access Management (PIM/PAM) added plus time and employee monitoring. User cyber awareness training included.

MATURITY LEVEL 2

Advanced Controls | Forensic Capabilities

Recommended as the minimum for all businesses, Level 2 adds extra layers of defence and tools to help identify and respond to cyber incidents (SOC monitoring with 1 year log retention). User cyber awareness training included.

MATURITY LEVEL 1

Improved Security | Foundational Strategy

A great starting point for small businesses, Level 1 delivers essential protection and a essential security strategy. User cyber awareness training included.

Unite Your Team with Microsoft 365

Building a collaborative workplace doesn't happen overnight - it requires the right tools and a commitment to connection. With today's cloud-based solutions, fostering teamwork is easier than ever.

Microsoft 365 empowers your business with a suite of features designed to streamline communication and boost productivity. From instant messaging and video meetings to secure file sharing, Microsoft Teams serves as your central hub for unified collaboration.

Whether your staff needs to chat, meet, or work together on documents, Microsoft 365 makes it simple to stay connected and get more done.

Experience the next level of teamwork with modern collaboration tools that help your business thrive.

Microsoft Copilot — Intelligence That Amplifies Your Team

Empower, Connect & Protect your business—now with AI that works where your people already do. Copilot weaves intelligence into everyday tools so your team can create faster, make clearer decisions, and spend more time on work that moves the needle.

What Copilot Delivers

Write and build at speed

Turn ideas into polished documents, presentations, and emails in minutes — so projects move from draft to done without the busywork.

Analyse data and act with confidence

Surface insights from spreadsheets and conversations, translate findings into next steps, and keep stakeholders aligned.

Automate the repetitive

Streamline routine tasks and approvals to free up time for growth, customers, and innovation.

Write and build at speed

Copilot operates across Word, Excel, PowerPoint, Outlook, and Teams, delivering a unified experience inside Microsoft 365—no new platforms or steep learning curve required.

Why Armour Networks for Copilot

Empower, Connect & Protect your business—now with AI that works where your people already do. Copilot weaves intelligence into everyday tools so your team can create faster, make clearer decisions, and spend more time on work that moves the needle.

Adoption that sticks

From executive use cases to frontline workflows, we map Copilot to roles, teach best practices, and measure real outcomes—not just activity.

Security-first, compliance-ready

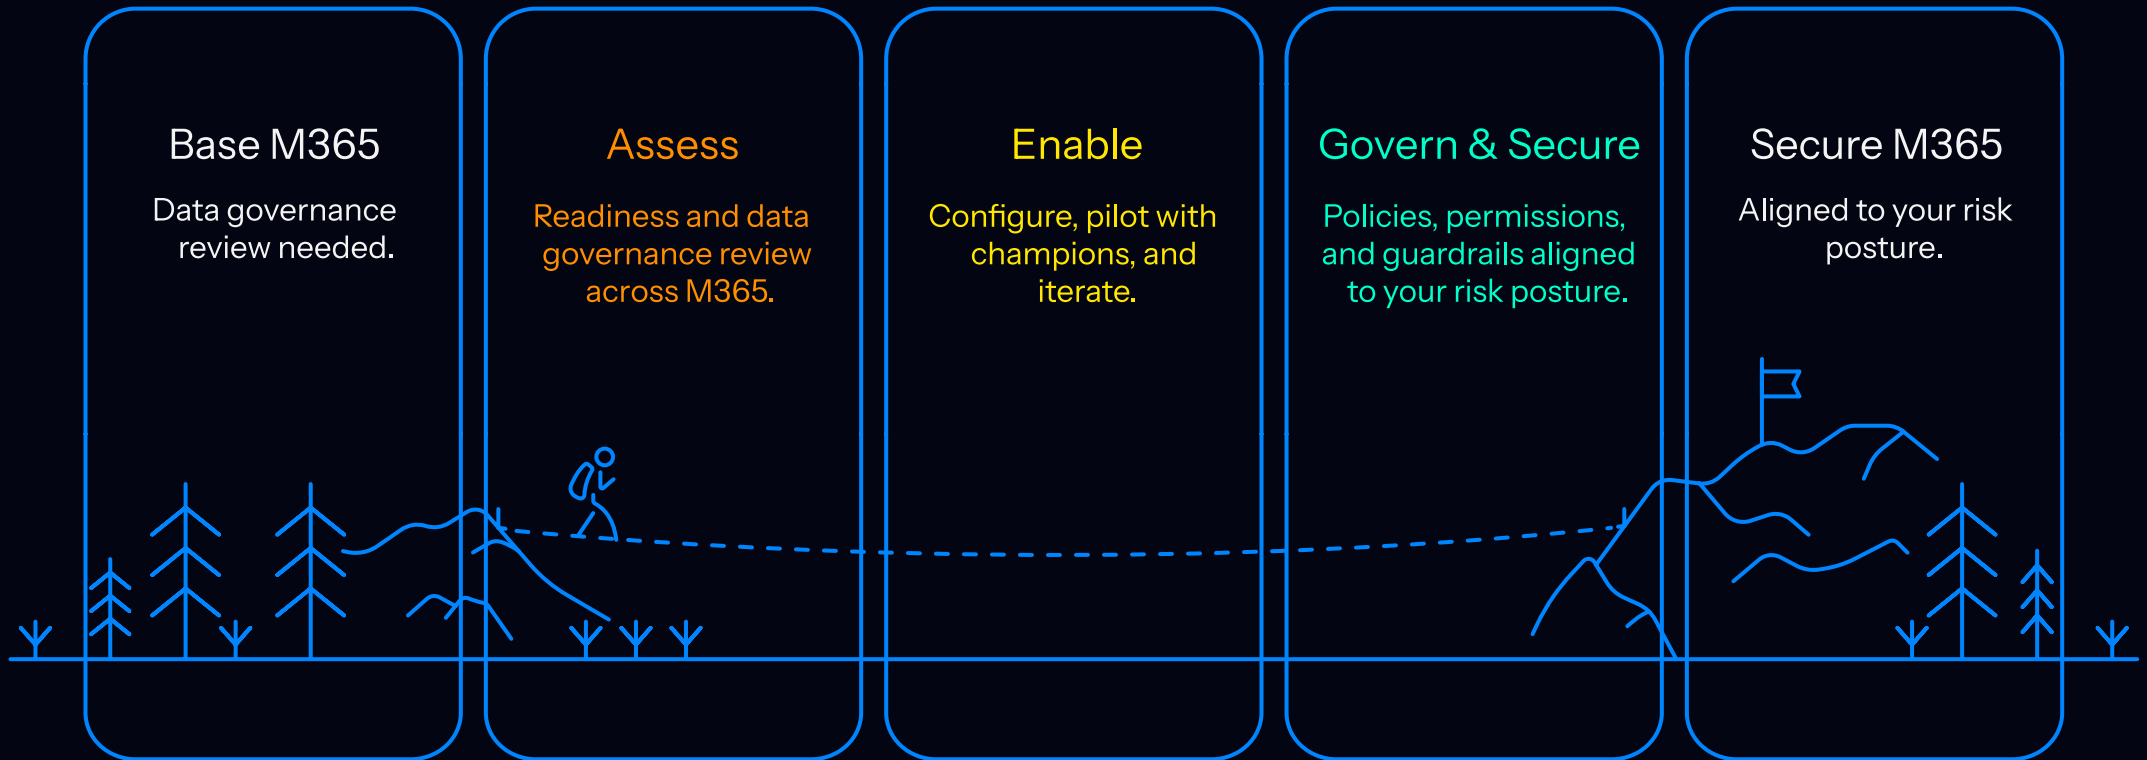

Our approach embeds governance and access control from day one, aligning Copilot with your broader cyber strategy and Essential Eight controls.

Deployment you can trust

We combine local expertise with global reach to roll out Copilot securely and in line with your policies — tailored to industries like Professional Services, Healthcare, Non profits, and Local Councils.

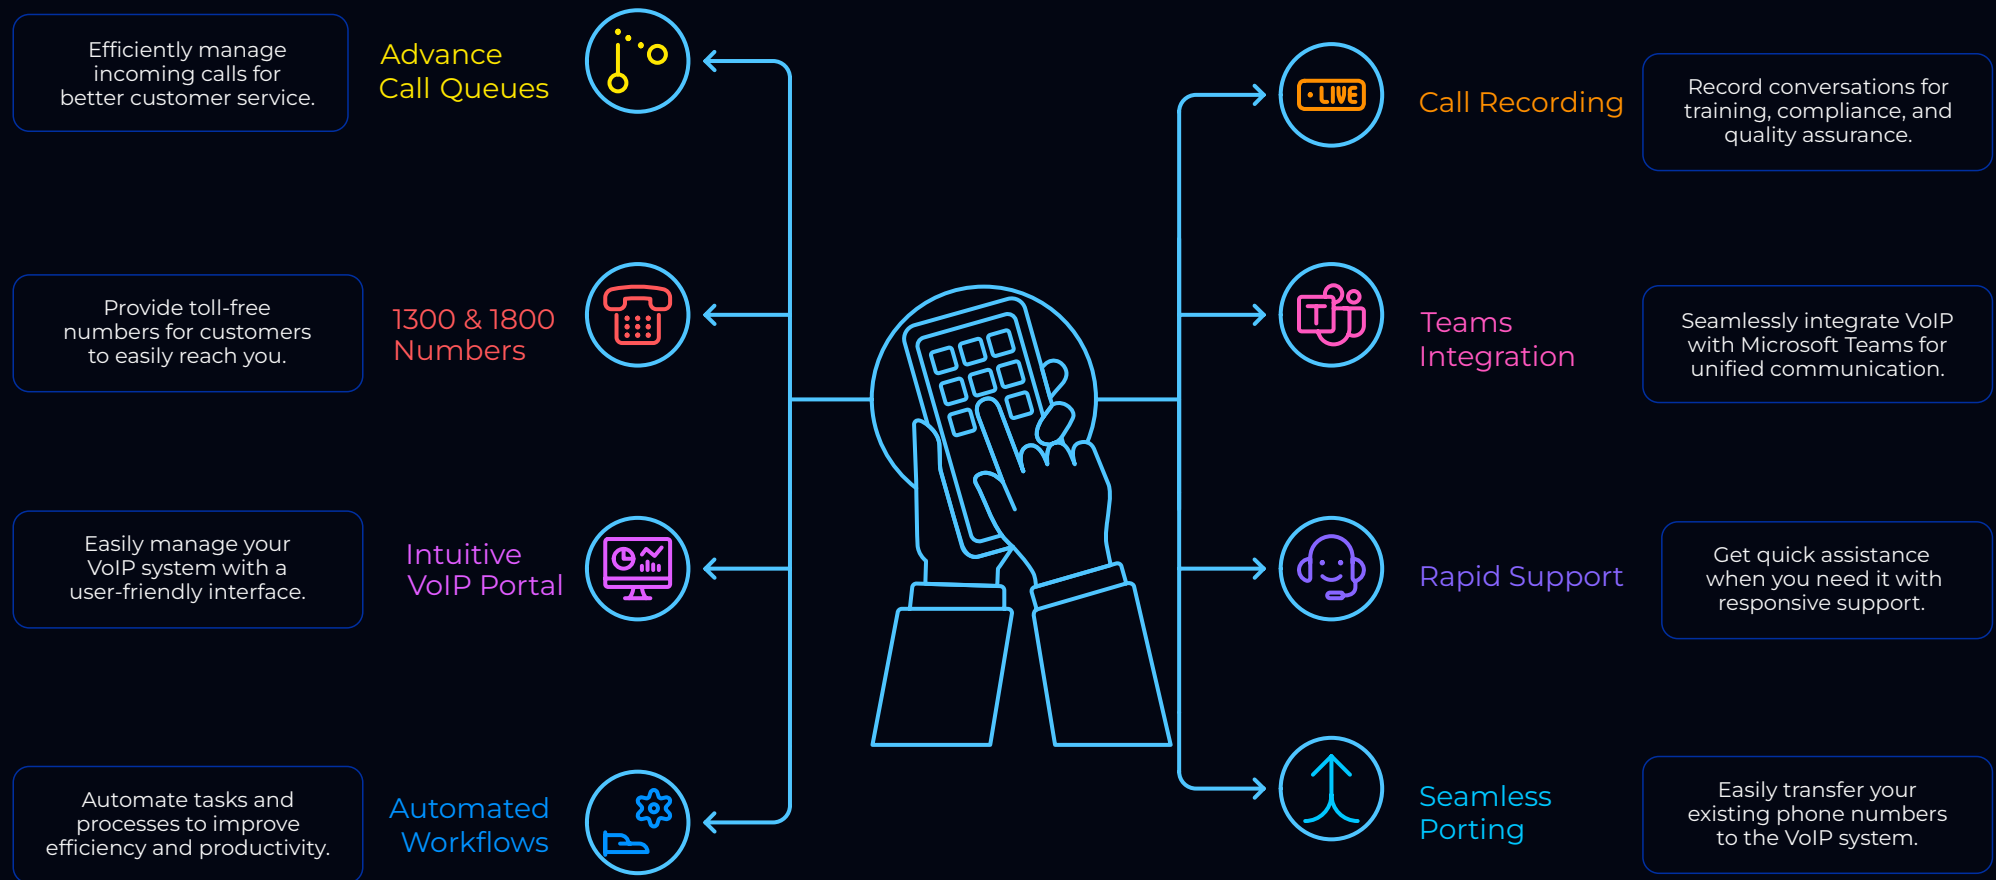

How We Deliver (Fast)

Empower Your Business with Scalable VoIP Solutions

From video conferencing solutions that foster equal participation to cloud phones that work anywhere—whether on wired handsets, mobile devices, or Microsoft Teams—Armour Networks ensures seamless communication for hybrid and remote teams. Backed by enterprise features and a no-term contract model, we make VoIP easy, secure, and cost-effective for businesses of all sizes.

Cloud Solutions for Every Business Need

Private Cloud

Private cloud environments offer dedicated resources, either on-premises or in a secure data center. This approach gives your organisation maximum control and flexibility—ideal for businesses with legacy systems or strict compliance requirements. If your operations demand extra assurance and can't fully transition to public cloud, private cloud is the trusted choice.

Best For:

- | Companies running legacy applications.
- | Organisations with stringent data regulations
- | Businesses seeking enhanced control over their infrastructure.

Public Cloud

Public cloud services enable your team to access applications and data from anywhere, on any device. With scalable resources and robust privacy controls, public cloud is perfect for businesses ready to embrace modern, cloud-friendly solutions. It's a cost-effective way to support growth and innovation without the need for heavy infrastructure investments.

Best For:

- | Startups and growing businesses.
- | Organisations ready to modernise their core systems.
- | Teams needing flexible, remote access.

Cloud Solutions for Every Business Need

Hybrid Cloud

Hybrid cloud combines the strengths of both private and public cloud, allowing seamless data sharing and resource scaling. This model helps your business handle sudden spikes in demand, optimise costs, and maintain local infrastructure for sensitive workloads. Hybrid cloud is the smart solution for organisations balancing legacy needs with the benefits of cloud technology.

Best For:

- | Businesses with a mix of cloud-ready and legacy applications
- | Organisations seeking scalability without large capital expenses.
- | Teams needing flexibility for sensitive data and workloads.

Build a Strong Foundation for Success

Armour Networks' modern infrastructure solutions help your business scale on demand and reach new heights. Let us guide you to the right cloud platform for your unique needs.

Protecting Your Network - From the Edge In

True security begins at the perimeter of your network, wherever your business operates. By proactively managing, updating, and maintaining your devices, Armour Networks helps ensure your network stays resilient—minimising risks, boosting performance, and supporting productivity for every user.

**Secure your business with Armour Networks
where proactive management means peace of mind.**

Managed Security Gateway

Protect your business with robust, monitored gateways that defend against external threats and unauthorised access.

Managed Local Area Network (LAN)

Keep your internal network running smoothly and securely with expert configuration, monitoring, and support.

Managed Wi-Fi

Deliver fast, reliable, and secure wireless connectivity for your team—no matter where they work.

Complimentary Cyber Security Assessment

Stay Ahead of Threats - Protect What Matters Most

Cyber-attacks are a growing risk for every business, especially small and medium enterprises.

Basic antivirus and backup solutions are no longer enough. When every minute counts and data loss can damage your reputation, you need robust protection and rapid recovery capabilities.

1 in 5 small businesses will experience a cyber breach this year.

81% of breaches impact small and medium businesses.

Did You Know?

The average cost of a cybercrime incident in Australia is **\$276,000**

97% of breaches could be prevented with today's technology.

Don't let a single vulnerability put years of hard work at risk.

Our Approach to Cyber Defence

Identify risks before they become problems.

Protect your systems with advanced security measures.

Detect threats early with proactive monitoring.

Respond quickly to incidents to minimise impact.

Recover efficiently to keep your business moving.

Armour Networks offers a free cyber security review to help you strengthen your defences and safeguard your future.

Information Bank

DNS Filtering

DNS filtering is defensive software that prevents cybersecurity threats by following simple logic: if a website has something potentially dangerous within it, DNS filtering blocks a user from visiting it in the first place. It's a zero-trust solution that leaves nothing to chance.

SOC- 24/7 Monitored

The SOC service offers 24/7 monitoring and one-year log retention to quickly detect and respond to cyber threats. It combines SOC with SIEM for forensic analysis and compliance, making it ideal for businesses needing strong security and regulatory alignment.

Zero Trust Administration

The Zero Trust Cyber Security Platform offers a unified approach to protecting users, devices, and networks against the exploitation of zero day vulnerabilities. The platform uses a combination of Allowlisting, Ringfencing, Elevation Control, Storage Control and Network Access Control to stop the misuse of vulnerable systems.

Information Bank

Privileged Identity Management

Privileged Identity Management (PIM), on the other hand, is concerned with managing the permissions already assigned to privileged accounts. It defines how these identities interact with critical resources and ensures that their granted access aligns with organizational security standards.

Privileged Access Management

Privileged Access Management (PAM) refers to a set of security policies and tools designed to regulate and oversee access to sensitive resources. Its primary focus is on controlling and monitoring access whenever a user attempts to connect to a privileged system or asset.

SaaS Cloud Backup (SIEM – 24/7 Monitored)

Is purpose-built, automated security platform (SIEM/SOAR) designed to monitor, detect, and remediate malicious activity across customer cloud applications.

The logo features a large, stylized letter 'A' in a dark teal color. The 'A' is composed of several overlapping geometric shapes, including triangles and trapezoids, creating a layered, architectural appearance. The background is a dark blue with a fine, repeating diamond-shaped grid pattern.
